

Quality Assurance (QA) Audit Services

eImagine ensures quality in your systems to align business and IT goals, improve testing efficiency, and restore confidence.

Reducing Tech Issues Before They Become Business Problems

With eImagine's QA Audit Services, we help reduce testing delays and maintenance costs, address excessive defects and regression issues, increase testing, and increase business confidence in new IT solutions.

QA Audit Offer Overview

Our QA Audit helps you ensure that your products, systems, and software not only meet business requirements but also perform reliably with minimal defects.

By reviewing both **functional testing** (how the system works across units, integrations, and end-to-end processes) and **non-functional testing** (performance, usability, security, and compatibility), we identify gaps, risks, and opportunities for improvement.

The result is greater confidence in your technology, stronger trust across the business, and a clear roadmap to higher quality and efficiency.

QA Audit Offer Process

- 1 Planning & Preparation** – define roles, gather systems/artifacts, align on pain points.
- 2 Audit Execution** – stakeholder interviews, process and test coverage review, code/configuration quality assessment, requirements gap analysis.
- 3 Report Development** – summarize findings, outline recommendations, provide roadmap.
- 4 Presentation of Findings** – share report, collect feedback, define next steps.
- 5 (Optional) Change Oversight** – support adoption, ensure best practice alignment, coach resources.

Example Timeline

Weeks 1-2

Planning & Preparation
