

QPA Software Testing Services

Ensuring Excellence in Your Systems — Faster, Smarter, with Less Risk

Solve Problems Before They Happen

Through our pre-negotiated QPA contract with the Indiana Office of Technology, state agencies can access proven, third-party quality assurance services — without the delays of traditional procurement.

Why Quality Assurance Through eimagine Works

1 Time Efficiency

Let your teams focus on mission-critical work while our certified testers own quality from day one.

2 Cost Savings

Identifying defects early can save 5-10x compared to fixing them post-launch.

3 Risk Reduction

Avoid outages, system instability, and poor user experiences through end-to-end testing.

Real Impact for State Agencies: we test through the eyes of your users — not just for defects, but for functionality, usability, and long-term performance. Our approach transforms QA from a checkbox to a driver of innovation.

Proven Success Stories

- Achieved 100% test coverage for early sprints prior to sprints beginning, enabling faster identification and remediation of defects and minimizing rework.
- Eliminated 100% of critical vulnerabilities in a legacy 20-year-old military financial system, significantly reducing security risk and ensuring continued operational integrity for the U.S. Army.
- Completed integrated, end-to-end testing 25 days ahead of schedule, allowing accelerated closure of final defects, early system stabilization, and minimizing go-live risk
- Delivered a defect-free launch of a state health application, enhancing public trust and ensuring uninterrupted service for mothers and their newborns.

Getting Started is Easy
